Why Do Protocols Vary?

August 1, 2018 William F. Sensakovic PhD 3

Why Do Protocols Vary?

- Old technology
- Vendor implementation
- “Pseudo-modalities”

August 1, 2018

William F. Sensakovic PhD

4

Old vs. New Technology

Impact of the detector change on absolute CT values of a calibration phantom was observed. Spatial resolution was improved by more than 10% for the solid-state system. As the system's modulation transfer functions were measured with a wire phantom and otherwise unchanged scanner geometry and image reconstruction algorithm, the increase of resolution is explained by the improved temporal response of the solid-state detector. At the same time, noise was reduced by 52% for a 20-cm diameter water phantom. The noise reduction corresponds to a possible reduction of patient dose by 23% for constant image quality, which is in good agreement with our prediction by estimations of both

Vendors

August 1, 2018

7

Vendors

August 1, 2018

8

New Pseudo-Modalities

- Virtual non-contrast . . . Ok
- Mono/Mixed Energies? . . . Maybe
- Iodine map? No equivalent

August 1, 2018

William F. Sensakovic PhD

9

Why Match Protocols?

- Physicians like consistency
 - Flow
 - Comfort
 - Ability
- Reduce variability in “Image Quality”

August 1, 2018

William F. Sensakovic PhD

10

Why Match Protocols?

Not Necessarily:

Best Image

Best Dose

“Optimized” as an individual machine

August 1, 2018

William F. Sensakovic PhD

11

How can we reduce variability?

August 1, 2018

William F. Sensakovic PhD

12

Match Dose

- Not ideal. . .
- Fast
- Not a bad start
- Practical

August 1, 2018

William F. Sensakovic PhD

13

Match Dose

- Assumes
 - Technology is about the same
 - Non-dose parameters are comparable

August 1, 2018

Match Subjective Quality

- Clinical-ish
- Quantitative-ish?
- Not just dose
- Fast-ish?

August 1, 2018

William F. Sensakovic PhD

15

What is Image Quality?

- Is this good image quality?
 - Yes
 - No
 - Need more info

August 1, 2018

William F. Sensakovic PhD

16

Fast and Dirty

- Section chief says ok or not
- Great for issues that are not subtle
- Great initial step

August 1, 2018

William F. Sensakovic PhD

17

Research-ish

- Complaint verified by section chief
- 1+ Radiologists rate
- Alter Protocol
- 1+ Radiologists rate

August 1, 2018

William F. Sensakovic PhD

18

Ratings

- Contrast?
- Resolution?
- Noise?
- SNR?
- Sufficient Grey-White differentiation?
- Malleus and the incus visible and well defined?

August 1, 2018

William F. Sensakovic PhD

19

Ratings Example

TABLE 4. Image Quality Assessment

BMI	Standard Protocol		Low-dose Protocol		*Significance (Standard vs. Low-dose)	
	Preoperative	Postoperative	Preoperative	Postoperative	Preoperative	Postoperative
<25	3.3 ± 0.7	3.2 ± 0.7	3.8 ± 0.8	3.1 ± 0.8	0.45	0.52
25–35	3.8 ± 0.8	3.7 ± 0.8	4.2 ± 0.8	3.3 ± 0.5	0.34	0.37

BMI indicates body mass index.
*Wilcoxon rank-sum test.

Task-based image quality was assessed using a Likert scale: 0, unsuitable for the task; 1, suitable for task with low confidence in findings; 2, suitable for task with medium confidence in findings; 3, suitable for task with high confidence in findings (nondiagnostic for soft-tissue reading); 4, suitable for diagnostic soft-tissue reading; and 5, suitable for diagnostic soft-tissue reading with high confidence in findings. Although the same scale is used for assessing both

JOURNAL OF APPLIED CLINICAL MEDICAL PHYSICS, VOLUME 16, NUMBER 4, 2015

CT protocol management: simplifying the process by using a master protocol concept

Timothy P. Szczykutowicz,^{1,2,3a} Robert K. Bour,¹ Nicholas Rubert,²
Gary Wendt,¹ Myron Pozniak,¹ Frank N. Ranallo^{1,2}

$$mA_{new\ master} = mA_{original} \frac{t_{original} P_{new\ master}}{t_{new\ master} P_{original}} F_{kV} F_D F_G$$

Identify a commonly used protocol which scans the same body region and patient size range you wish to create a new protocol for. This protocol would be denoted using the "original" subscripts in Equation 1.

Measure the mA used as a function of patient size for as many patients as possible (see Figure 2).

Determine the minimum and maximum $m_{\text{req}, \text{min}}, m_{\text{req}, \text{max}}$ requested by this protocol (see Figure 3).

to choose a new target of lower CNR version of the original protocol for the same scanner, insert the minimum and maximum $\text{mAs}_{\text{original}}$ values into Equation 1. Adjust acquisition parameters until the minimum and maximum mAs_{new} values fall within scanner limits.

To customize the new protocol to a different scanner, insert the minimum and maximum $mA_{\text{new scanner}}$ values into Equation 2. Adjust acquisition parameters until the mA values fall within the new scanner's limits.

For the new CNR level, we now have a set of t , P , and W AEC control parameters that should provide the requested CNR and a properly functioning AEC.

For the new CNR level, we now have a set of t , P , and KV AEC control parameters that should provide the requested CNR and a properly functioning AEC customised for a different scanner.

FIG. 4. Flowchart detailing the proper use of mAs data and Eqs. (1) and (2) in creating protocols on the same scanner at different CNR levels and customizing these protocols to a different scanner.

27

Optimization Stakeholders

- JC PC.01.03.01 A26
 - A Lead Tech
 - An Interpreting Physician
 - A Medical Physicist
- . . . err kinda?

August 1, 2018

William F. Sensakovic PhD

31

Optimization Stakeholders

- Who else?
 - Imaging Admin
 - Lead Tech at each site/region
 - Section Chiefs

August 1, 2018

William F. Sensakovic PhD

32

Starting Point

- A good current protocol you trust
- Other sources
 - AAPM online protocols
 - “Overview of Resources Available for CT Protocol Optimization”
 - amos3.aapm.org/abstracts/pdf/127-35537-418554-127014-425067081.pdf
 - CTISUS
 - Published Literature
 - Etc.

August 1, 2018

William F. Sensakovic PhD

33

Optimization Process: Permission

- Lock down machines
- Policy about who can alter protocols
 - “This” patient vs. system
- Imaging admin buy in
 - No consequence, no care?

August 1, 2018

William F. Sensakovic PhD

34

Optimization Process: Iteration

- Issue: Peds CT Chest Angio “too noisy” at site X
- Dose too low
 - Confirmed by literature search and site comparison
- Plan: Bump mA on machine

August 1, 2018

William F. Sensakovic PhD

35

Optimization Process: Iteration

- Do: Compare scanned phantom with and without bump then scan a new patient
 - Might just jump to patient

August 1, 2018

William F. Sensakovic PhD

36

Optimization Process: Iteration

- **Check:** Ask Peds section chief if new image quality is acceptable

August 1, 2018

William F. Sensakovic PhD

37

Optimization Process: Iteration

- **Act:** become standard the again

August 1, 2018

William F. Sensakovic PhD

38

Time vs Effort vs Outcome

- What do you have FTE to do?
- Impression is ok
- Quantitative Deep dive is better
- Proactive to head off issues

August 1, 2018

William F. Sensakovic PhD

39

Prioritize

- Most Performed
- Complaints
- Pediatric
- Specialty Scans
- Highest Dose

August 1, 2018

William F. Sensakovic PhD

40

What Do the Regulations Say?

- ACR and JC regs don't really call out matching standardization
 - Reviewed
 - Based on Standards

Standard PC.01.03.01
The organization plans the patient's care.

Elements of Performance for PC.01.03.01

A.25. The organization establishes or adopts diagnostic computed tomography (CT) imaging protocols based on current standards of practice, which address key factors including clinical indication, contrast administration, age (to indicate whether the patient is pediatric or an adult), patient size and body habitus, and the expected radiation dose index range. ...

Note. This element of performance does not apply to dental cone beam CT radiographic imaging studies performed for diagnosis of conditions affecting the maxillofacial region or to obtain guidance for the treatment of such conditions.

A.26. Diagnostic computed tomography (CT) imaging protocols are reviewed and kept current with input from an interlocking multidisciplinary medical physicist and radiology technologist to make certain that they adhere to current standards of practice and account for changes in CT imaging equipment. These reviews are conducted at time frames identified by the organization. ...

Note. This element of performance does not apply to dental cone beam CT radiographic imaging studies performed for diagnosis of conditions affecting the maxillofacial region or to obtain guidance for the treatment of such conditions.

August 1, 2018

William F. Sensakovic PhD

41

Beyond fiddling with numbers

- Could keep scanners from doing certain scans, business decision
 - Used those old scanners and protocols for a long time – was that malpractice
- Admins important

August 1, 2018

William F. Sensakovic PhD

42

Should They Match?

- Do you limit new to match old?
 - Probably not
- Do you reroute around old machines
 - Maybe
