

Data Sharing Landscape

Scott W. Hadley PhD

Associate Professor University of Michigan Radiation Oncology

IHE RO Technical Committee Co-Chairman

Standards & Standards Organizations

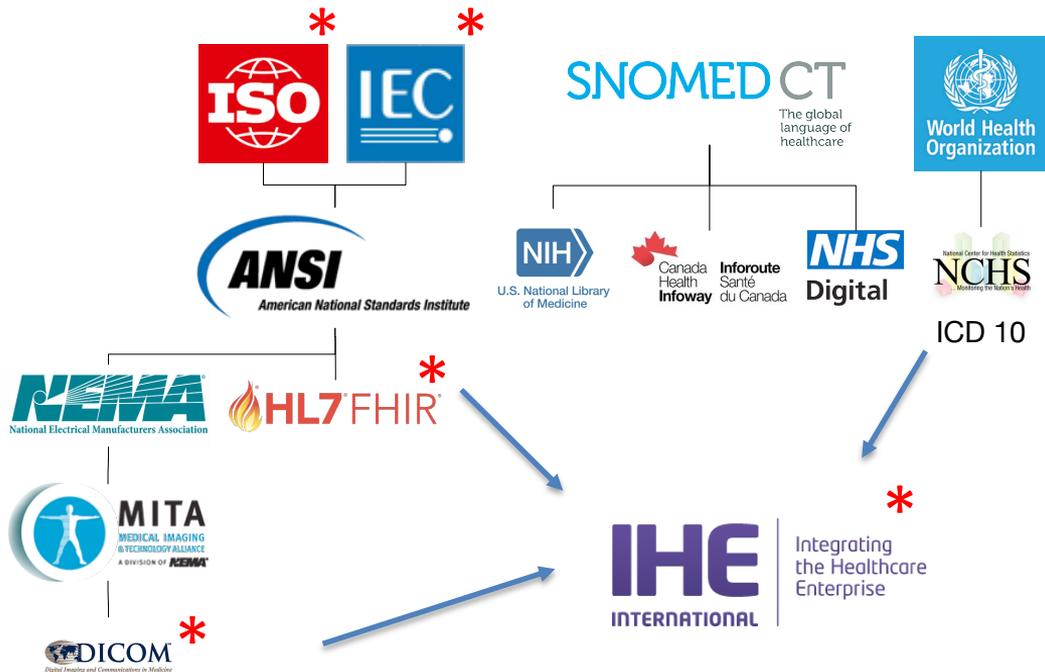

International Level

Countries join ISO, IEC, SNOMED CT...

National Level

In US Standards Orgs Belong to ANSI

At all levels Standards are drafted.

* AAPM member Involvement

Health Level 7

- Health Level 7 (HL7)
 - ANSI accredited Standards Development Organization
- Different messages can be sent
 - ADT Admit, Discharge, Transfer
 - Name, DOB, Hospital ID#
 - SIU Scheduling Information Unsolicited
 - Appointments
 - CDA Clinical Document Architecture
 - Meta Data with RTF, Word Document, PDF

- Fast Healthcare Interoperability Resource
 - Under Development...
 - Standardizes the exchange and not just content
 - API focused on pulling data/results when needed
- Health Level 7 (HL7)
 - Is Document focused
 - Created when needed and then static after that
 - Exchanged and stored but can suffer from “bit rot”

SNOMED CT

The global
language of
healthcare

- Standard Nomenclature in Medicine Clinical Terminologies
 - An Ontological Foundation
 - Coding of Common Terms
 - Translated into multiple languages
- Full Coding of Anatomy

SNOMED Browser

IDC 10 and Staging

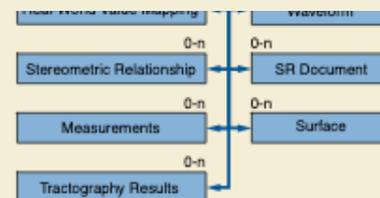

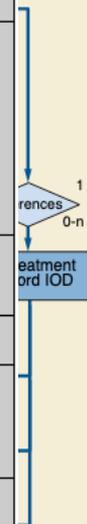

- International Disease Classification Version 10
 - WHO and National Center for Healthcare Statistics
 - Diagnosis Coding
 - ICD-O (oh not zero)
 - Site and histology
- American Joint Committee on Cancer
 - TNM Staging
 - <https://cancerstaging.org/>

DICOM Standard NEMA MITA

Attribute Name	Tag	Attribute Description
Patient's Name	(0010,0010)	Patient's full name
Patient ID	(0010,0020)	Primary identifier for the patient. Note <i>In the case of imaging a group of small animals simultaneously, the single value of this identifier corresponds to the identification of the entire group. See also Section C.7.1.4.1.1.</i>
Include Table 10-18 "Issuer of Patient ID Macro Attributes"		
Other Patient IDs	(0010,1000)	Other identification numbers or codes used to identify the patient.
Other Patient IDs Sequence	(0010,1002)	A sequence of identification numbers or codes used to identify the patient, which may or may not be human readable, and may or may not have been obtained from an implanted or attached device such as an RFID or barcode.
>Patient ID	(0010,0020)	An identifier for the patient.

The Importance of Coding Data

- What is “Coding data”
- Attaching a computer indexable code to each data element
- Advantages
 - Well defined
 - Immutable to updates to the standard
 - Allows mapping of data
 - Translated into different languages

▼ RT Plan		CIOD
▼ Patient		M Module - Patient
▶ (0008,1120) Referenced Patient Sequence	3	Sequence
(0010,0010) Patient's Name	2	Person Name
(0010,0020) Patient ID	2	Long String
(0010,0021) Issuer of Patient ID	3	Long String
(0010,0022) Type of Patient ID	3	Code String

<https://dicom.innolitics.com>

Table 3
Partial List of Database Elements with HL7 and DICOM Mapping

Data Name	HL7 Segments	DICOM Tags
Patient name	PID-5	(0010,0010)
Primary patient identification	PID-4*	(0010,0020)
Patient's date of birth	PID-7	(0010,0030)
Requested procedure—name	OBR-4 [†]	(0040,1001) (0032,1060)
Requested procedure—code	OBR-4 [‡]	(0032,1064)
Current Procedural Terminology procedure code	OBR-4 [§]	(0040,1400)

- IHE RSNA Collaboration
 - 1990's: RSNA instrumental in DICOM promotion / adoption; system interoperability required use of the HL7 standard
 - 1997: Progress toward producing turnkey devices able to “plug and play” with existing standards— required definition of specific use-cases and specific architectures
 - 1998: Engagement with the Healthcare Information and Management Systems Society (HIMSS) to establish momentum and direction for system *interoperability* — the IHE effort was initiated

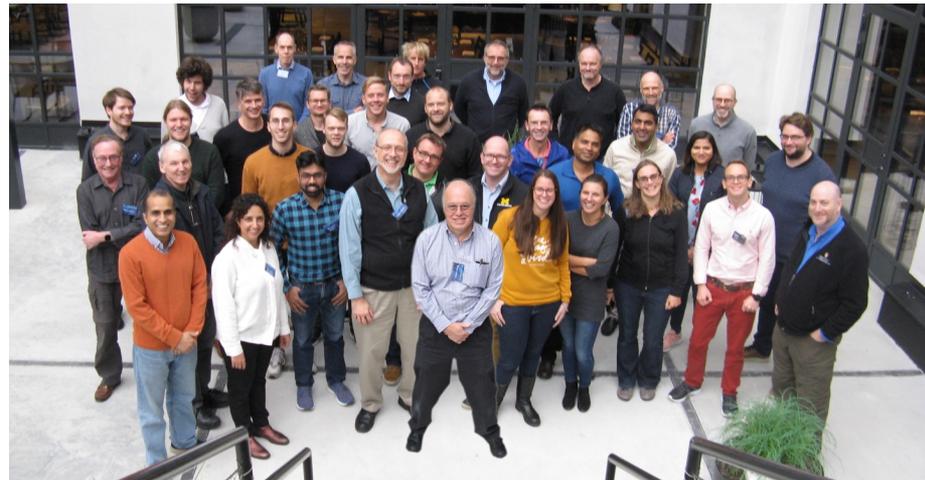

How IHE-RO Functions

Connectathon

- IHE NA Connectathon (annual since 1999)
 - Radiology and 9 other domains
 - >100 vendors, >550 engineers
 - Cleveland Convention Center

- IHE-RO Connectathon (since 2007)
 - Radiation Oncology Domain
 - 5-8 vendors
 - Stockholm Sweden
 - October 2019

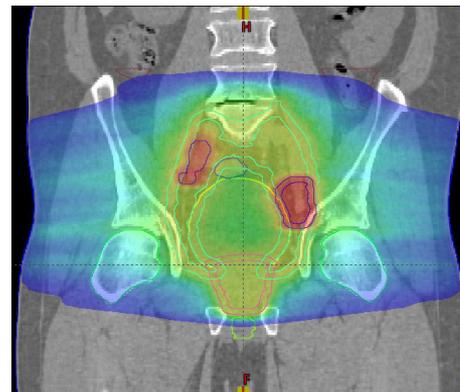

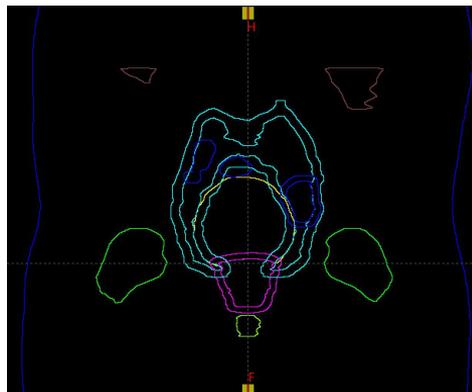

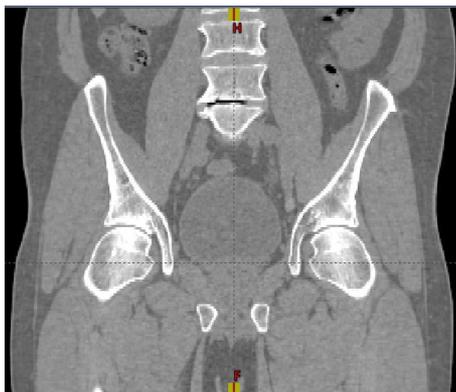

Results are public

3 Actors

1. Outside Hospital Plan and History Exchange
 - CT, Structures and Dose with Tx Records
 - Continuation or Retreatment situation
2. Clinical Trial Record Exchange
 - CT, Structures and Dose with Tx Records
 - Registered images for Planning
 - Treatment Imaging with IGRT
3. “Archive” Export
 - Document as much as you can.

Single Plan with Revision

What you can do?

- Know
 - What information is needed by the cancer registry or clinical trial team
 - Required from ethical/institutional review board
- Engage ...
 - In the clinical trial design process within your institution
 - Purchase process of RO and EMR software
 - Standards development and implementation
- Encourage
 - Data encoding in your systems, Rx each tumor, ICD-10, AJCC Staging...
 - The use of data availability statements
