2

Measurement Based Pretreatment PSQA

- 1D Detector
 - Ion chamber
 - OSL
- 2D Detector
 - 2D detector array
 - Film
 - EPID
- 3D Detector
 - Gel dosimeter
- Labor Intensive**

Memorial Sloan Kettering Cancer Center

3

Trajectory Log Files

- Snapshots of the state of machine during delivery
 - Recorded by machine via internal sensors
 - Recorded by third party software
- Sampling frequency: from 20 ms to 250 ms
- File location varies
- Parameters of delivery
 - MU
 - Energy
 - Gantry angles
 - MLC position
 - Jaw position

Vendor	Varian		Elekta	
Type	Dynalog	Trajectory log	TRE	iCom
Machine Type	Clinac	TrueBeam	All	All
Sampling Time (ms)	50.0	20.0	25.0	250.0
Log file location	Local	Network	Local network	Local network
Time Stamp	Yes	Yes	Yes	Yes
MRN	Yes	Yes	No	Yes
Plan ID	Yes	Yes	Yes	Yes
Beam Name	Yes	Yes	Yes	Yes
MU	Yes	Yes	Yes	Yes
Dose Rate	Yes	Yes	Yes	Yes
Energy	Yes	Yes	Yes	Yes
MLC	Yes	Yes	Yes	Yes
Jaws	Yes	Yes	Yes	Yes
Gantry	Yes	Yes	Yes	Yes
Couch Position	Yes	Yes	Yes	Yes
Format Available	Yes	Yes	No	Yes

Analysis

- Tools
 - In-house
 - Commercial
- Type of analysis
 - Automatic parametric analysis
 - By control point
 - Parameters:
 - MLC, Jaw, gantry, MU, energy etc.
 - Reconstructed fluence analysis
 - Dose Reconstruction in phantom / patient

6

Example of a log file analysis

```

Campus: Main
Room Name: 442
MRN: 12345678
Patient Name: Test
Plan Name: 7_Cy_TL_QQ
It is VMAT plan
BeamNumber in RTPlan: 1
BeamName in RTPlan: 01, BeamName in Log: 01
BeamDescription: 08VMAT
MU Planned in Log: 409, Delivered last MU: 408.9995, MU in RTPlan: 409
Trajectory .bin file Date/Time: 20130724182945
Trajectory .txt file Date/Time: 20130724182945
RTPLAN folder: /usr/apps/linac/linac/Data/Log/Dicom/12345678/7_Cy_TL_QQ/RTPLAN.DCM
Carriage/Leaf #: A125 -> Percent difference for this leaf(%): 15.1
Carriage/Leaf #: A130 -> Percent difference for this leaf(%): 16.6
Carriage/Leaf #: B127 -> Percent difference for this leaf(%): 17.7
Carriage/Leaf #: B129 -> Percent difference for this leaf(%): 22.1
Carriage/Leaf #: B131 -> Percent difference for this leaf(%): 29.7
Jaw positions no error
Gantry Angle no error
Coll. Rex. no error
Planned MU is within tolerance
Delivered last MU is within tolerance
    
```

MLC deviation > 0.5 mm for more than 15% of the total beam-on time

Fluence and Dose Reconstruction

LinacView (Standard Imaging, Middleton, WI)

Analysis between a machine log file and the corresponding plan using fluence comparison

Tyagi N, Yang K, Yan D. Comparing measurement-derived (3DVH) and machine log file-derived dose reconstruction methods for VMAT QA in patient geometries. J Appl Clin Med Phys. 2014 Jul 8;15(4):4645.

2021 AAPM Annual Meeting

9

Online Adaptive RT: 1.5T MR Linac online QA

Lim SB et al., An Investigation of using Logfile Analysis for Automated Patient Specific Quality Assurance in MRgRT, 2021 (Under Review)

2021 AAPM Annual Meeting

10

Predictive model for MLC failure

Wu, B., Zhang, P., Taraska, B., Karchevski, D., and LoSasso, T. (2019). Utilizing historical MLC performance data from trajectory logs and service reports to establish a predictive maintenance model for minimizing treatment disruptions. Med. Phys., 46, 4714-483.

2021 AAPM Annual Meeting

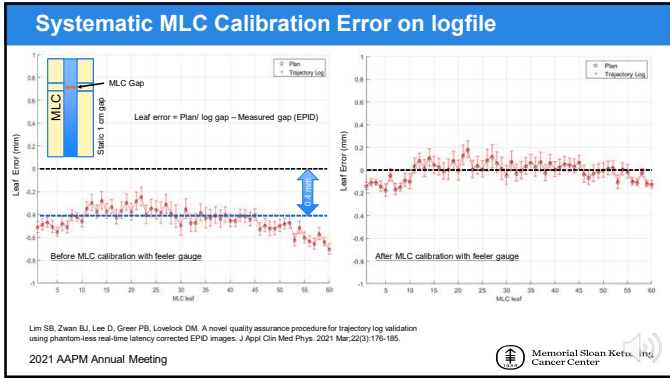

11

Log File Analysis Limitations

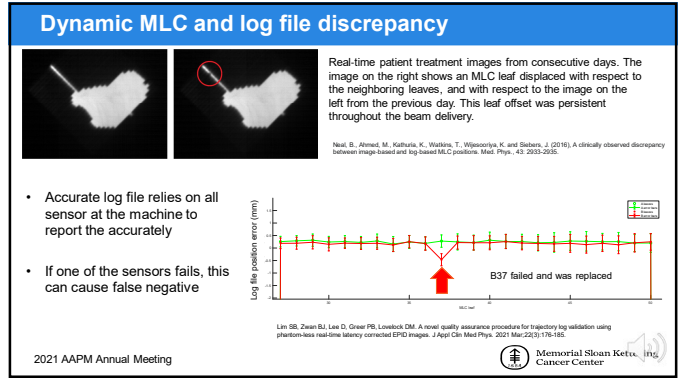

- Log file analysis depends on the commissioning and the calibration of
 - Mechanical system (including MLC, jaw, gantry... etc.)
 - Dosimetry tuning and output of the machine
- Dose Reconstruction
 - Accuracy of the beam model
 - Dose calculation algorithm of treatment planning system
- Data integrity

2021 AAPM Annual Meeting

12

13

14

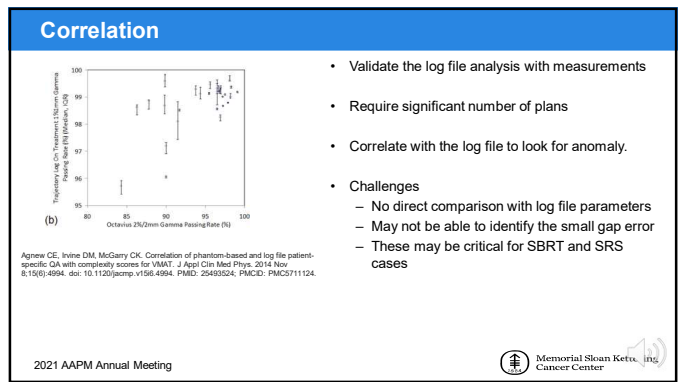

Commissioning and QA

- Parameters
 - Most parameters, such as MU, can be checked with traditional technique using TG-142, MPPG 9a/8a, and TG-51
 - MLC can be challenging
- MLC
 - Initialization of the MLC
 - Static MLC log file QA
 - Feeler gauge
 - Graph paper / light field
 - High resolution 2-D array
 - Film
 - EPID
 - Dynamic MLC log file QA
 - Correlation technique
 - Measurement correlation with log file
 - Direct MLC comparison with log file difficult
 - EPID with Phantom
 - EPID Phantom-less

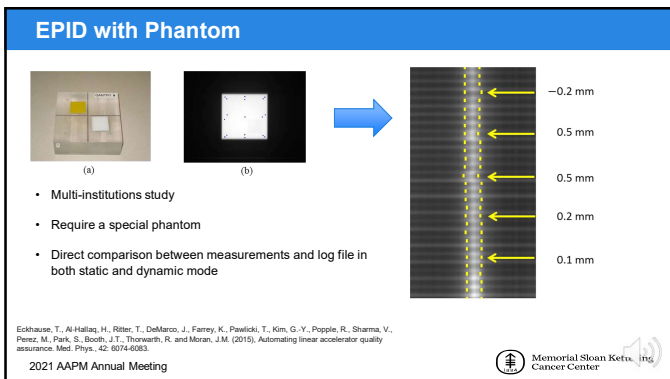

2021 AAPM Annual Meeting

Memorial Sloan Kettering Cancer Center

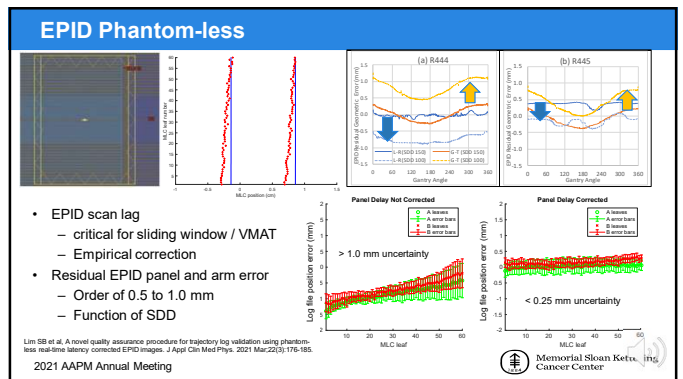

15

16

17

18

Conclusions

- Log file analysis can provide automated and accurate delivery information
- Significantly streamline workflow and improve throughput
- High quality data can be used to build prediction models
- Calibration and sensor errors can provide false negative
- Proper commissioning and routine QA need to be performed to ensure the fidelity of the system
