University of Iowa Health Care

Clinical Experience Accountability through an In-House Database

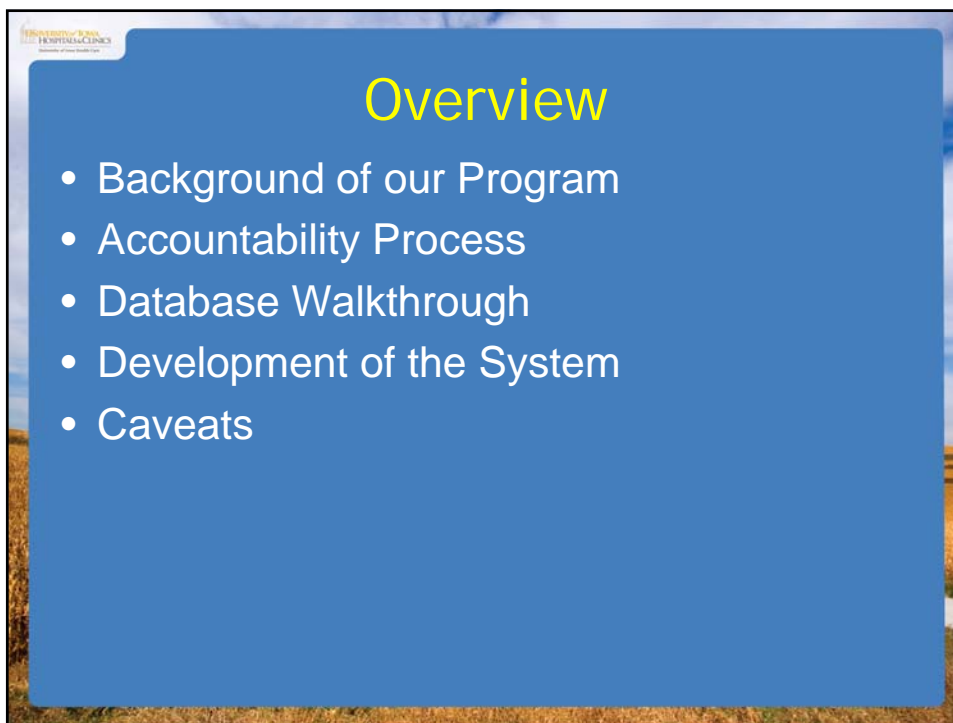

R. Alfredo C. Siochi, PhD
University of Iowa Hospitals and Clinics

UNIVERSITY OF IOWA
HOSPITALS & CLINICS
University of Iowa Health Care

Overview

- Background of our Program
- Accountability Process
- Database Walkthrough
- Development of the System
- Caveats

University of Iowa Residency

- 2 year program
 - 1 resident per year
 - 12 rotations + optional 13th (protons)
- Mentors
 - Rotation mentor
 - Weekly clinical mentor
- Clinical Training
 - Special Procedures
 - Routine Tasks: QA, Plan/chart checks, Troubleshooting

Overall Progress Tracking

Primary Rotation	Mentor	Start Date	7/1/2013 time, mos.	Resident	Test	Pass Date	Comments
Orientation	AS		0.5			7/16/2013	
Dosimetric system acceptance testing/Commissioning/QA	DH		2			9/15/2013

UNIVERSITY OF TEXAS
HOSPITALS&CLINICS
University of Texas Health System

Some Competency Policies

- Resident has option to participate in clinical mentor's activities
- Residents in a rotation have priority for participating in clinical activities related to the rotation
- GOAL: Increase awareness of, and participation in, clinical activities

V1 software

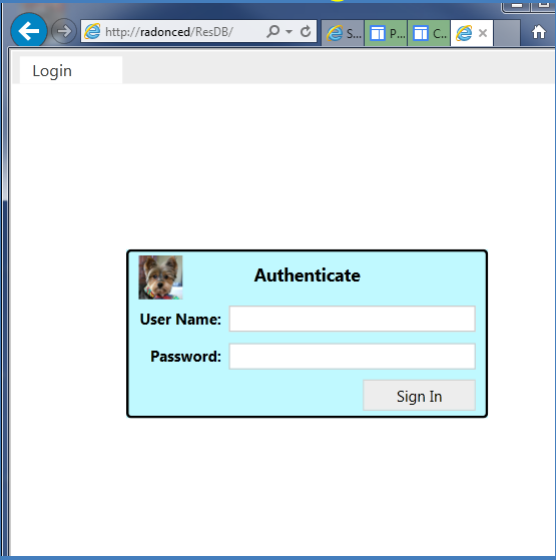

- Activities entered by Resident into DB
 - Hard to enter partial activities
- Mentors Review and Communicate Through DB
- Lots of Manual Work:
 - Secretary compiled activities for a given competency
 - DB structure did not account for our changing definitions of competency
 - Secretary reminded mentors to approve activities (based on a report)

V2 Software

- Web-based
- Simplified GUI
- Edit activity with various parts
- Automated Competency Analysis
- Activity and Completion Metrics
- New DB structure to support variable competency requirements

UNIVERSITY OF TEXAS
HEALTH SCIENCES CENTER
HOUSTON

Percent Complete

- $T = \sum_i m_i c_i$
 - m_i = minimum number of times i^{th} activity should be performed
- c_i = credits for i^{th} activity
- $P = \frac{\sum_i a_i c_i}{T}$,
- a_i = Lesser of {number of times the i^{th} activity was performed, required number}

UNIVERSITY OF TEXAS
HEALTH SCIENCES CENTER
HOUSTON

Activity metric

- $T = \sum_i m_i c_i$
- $A = \frac{\sum_i a_i c_i}{T}$,
- a_i = number of times the i^{th} activity was performed

Metrics aren't perfect

- Must also examine the summary table
- Solo performances are worth more than guided ones
- Percent Complete – flag at 80%
- Grant Competency based on discussion with mentors and resident
 - “Any staff physicist can recommend a resident for competency discussion before reaching the target goals if the resident has shown significant progress in a procedure and is deemed competent.”

Competency

Brachytherapy approved 7 /31 /13

Eye plaques approved 7 /31/13

Treatment Planning approved 7 /31 /13

Next closest -IORT, 75%, and Stereotactic Radiosurgery, 71% complete.

Development

- Visual Studio – Lightswitch
 - Rapid Application Development Tool
 - M-V-VM; silverlight
- SQL Server
- IIS (Web) Server
- C#.net
- More info – ask me later!

Caveat 1 - a lot of work, Why bother?

- Personal Progress Record
- Helps address Gaps in training
- Provides confidence to other clinical staff
 - you know the looks the therapists give the residents....
- Increase Resident Clinical Contribution
 - ...return on investment of training...

Caveat 2 - modifying procedures

- Hard to do mid-stream
- E.g. IORT steps were re-defined.
- What happens to records with the old steps? How do you track competency?
- Work-arounds:
 - retire the old one, and redefine the competency that contains it
 - Modify the old one, defining required steps and optional steps (where changes occurred)
 - Convert old activities to use redefined steps

Caveat 3 - moving target

- Who knows what numbers really should go in this table?
- The table structure and numbers have been revised many times.
- Process or Concepts or Both?

Procedure	Required Observe	Required Guided	Required Solo
HDR Tandem & Ovoid 3D	2	2	2
HDR Tandem & Ovoid Planar Imaging	2	1	X
HDR Vaginal Cylinder	2	2	2
QA - HDR Daily	3	2	3
QA - HDR Source Calibration	1	1	1

What if the data were available nationally ?

- Mine the DB
 - “Average” resident learning rate
 - How well are we doing relative to the average?
 - More realistic competency tables ?
- Standardize procedures, nomenclature, evaluation methods, etc.

Other systems for tracking resident progress...

- Typhon: student tracking for nursing & allied health programs (example in MBPCC)

Summary

- The DB was written to support our clinical experience accountability process
- Helps us spot gaps in training with ample time to find opportunities to fill the gaps
- Caveats – needs a well-defined program, hard to modify on the fly. Would be easier with national standards.

Thank You!
